HTT CHIPSEQ ANALYSIS

WT & Q111het & QQ

Amol Carl Shetty

August 26, 2021

Dataset Descriptions

- Dataset 1 (GSE102750)

Samples	11	
Conditions	Wt ChIP	3 replicates
	Wt_Input	2 replicates
	Q111het_ChIP	4 replicates
	Q111het_Input	2 replicates
Matched ChIP-Input samples	No	
# Sequencing Runs / sample	2	
Sequencing Read Length	25	
Tissue	Striatal	

Dataset Descriptions

- Dataset 2 (Genewiz :: HD-ASO-Striatal)

Samples	4	
Conditions	STR-Wt ChIP	1 replicates
	STR-Wt_Input	1 replicates
	STR-Q111het_ChIP	1 replicates
	STR-Q111het_Input	1 replicates
Matched ChIP-Input samples	Yes	
# Sequencing Runs / sample	1	
Sequencing Read Length	150	
Tissue	Striatal	

Dataset Descriptions

- Dataset 3 (Genewiz :: 30-415606808)

Samples	12	
Conditions	Wt ChIP	3 replicates
	Wt_input	3 replicates
	QQ_ChIP	3 replicates
	QQ_input	3 replicates
Matched ChIP-Input samples	Yes	
# Sequencing Runs / sample	1	
Sequencing Read Length	150	
Tissue	Striatal

FUTURE STEPS

Downstream Analysis

- On-going analysis
 - Finalize which set of peaks to use for downstream analyses based on
 - Reproducibility categories, and
 - Differential Binding results (**edgeR_corrected or combat_corrected?**)
 - Questions?
 - **Should we use a different criteria to determine reproducibility?**
 - **Should we include the “Potential * peaks” for downstream analyses?**
 - Potential WT-specific peaks will be added to WT-specific peaks
 - Potential mHTT-specific peaks will be added to mHTT-specific peaks
- Future analysis (based on relevant set of peak calls)
 - Motif Analysis
 - Enrichment against different reference sets (ChromHMM, HDSigDB, etc)
 - Enrichment of Histone Mark regions
 - Existing ActiveMotif Histone Mark regions
 - Additional data from ActiveMotif for H3K9me? Delivery date?
 - Note: **GAT Analysis is resource intensive and time consuming**
 - Hence heavily dependent on available grid resources and grid load
 - The more iterations I run, the slower the analyses
